

# ADVAN **A050**

*All New Ultimate Street Sport Tyre*

High Grip

High Speed

Handling

# Asymmetric Tread Pattern

## Large Centre Block

The large centre block area, together with the centre rib provides not only strong braking, but also better stiffness against lateral forces.

## Quicker Lap Time

A050 minimises the movement of the centreline of the contact area when cornering, enabling it to achieve good handling response on different circuit surfaces at high speed.

## Newly Developed Profile And Construction

Optimised profile arrived at after numerous test drives.

## Groove Location Control

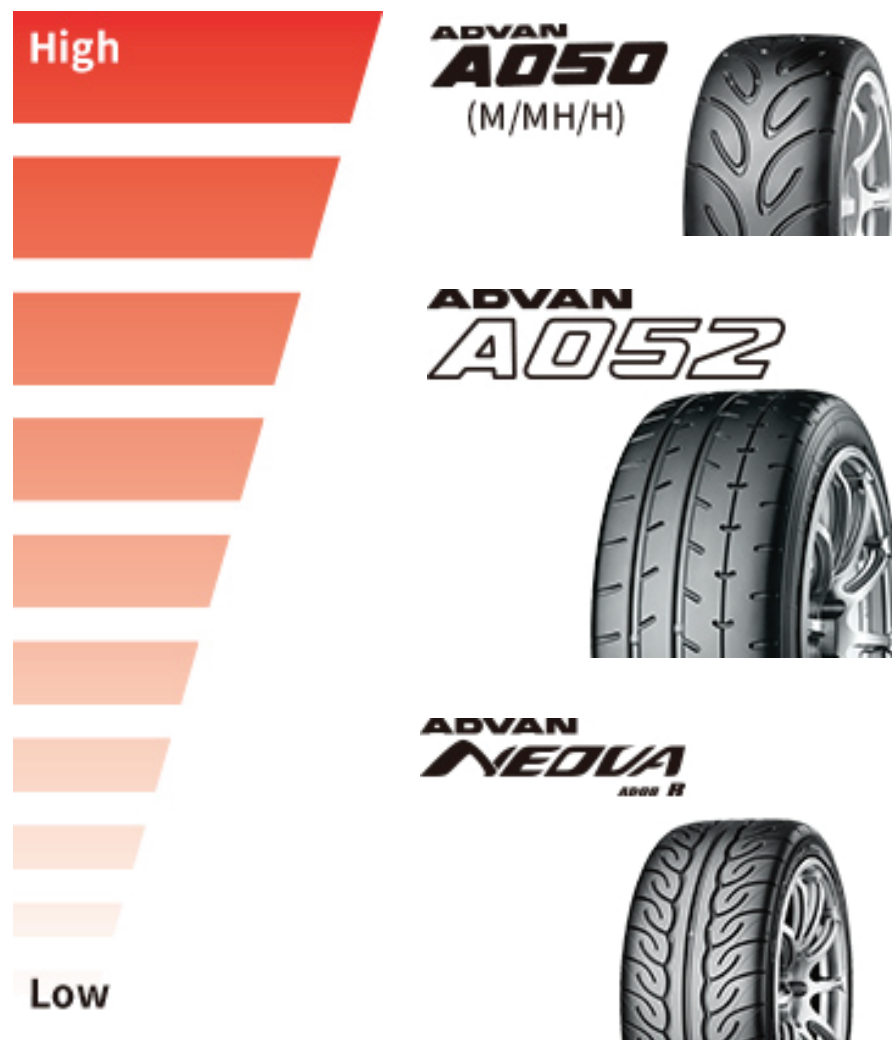

Optimising the groove distribution achieves smooth handling in corners due to stable contact area from shoulder to centre.

## Round Edge-Shaped Grooves

Sequential wide round edge-shaped grooves distribute the pressure from the road and results in better tread wear.

# Sport Performance

High Grip / Circuit / Lap Time

ADVAN A050 has several compounds which are fitted running distance or temperature range. We recommend A050 to the user who want to win the race seriously.

ADVAN A052 keeps both high driving performance and environmental performance at a high level. The handling performance is excellent. As well as a Pro-driver, it is suitable for all people who want to enjoy motor sports. Compared with ADVAN NEOVA AD08R, we recommend ADVAN A050 to more circuit-oriented user.

ADVAN AD08R is a street sport tyre with aggressive pattern design. This is an almighty performance tyre corresponding from street to circuit. Compared with ADVAN A052, we recommend ADVAN NEOVA AD08R to more street-oriented user.
