

Racing GTC02

SUPER GT direct street model "Racing GTC02"

SUPER GT wheel "RA series" with overwhelming trust and achievements Incorporating the design and design concept of optimized for street use high performance wheels.

Sizes: 17 / 18 / 19 inch
Colour: Hyper Silver, Matte Black

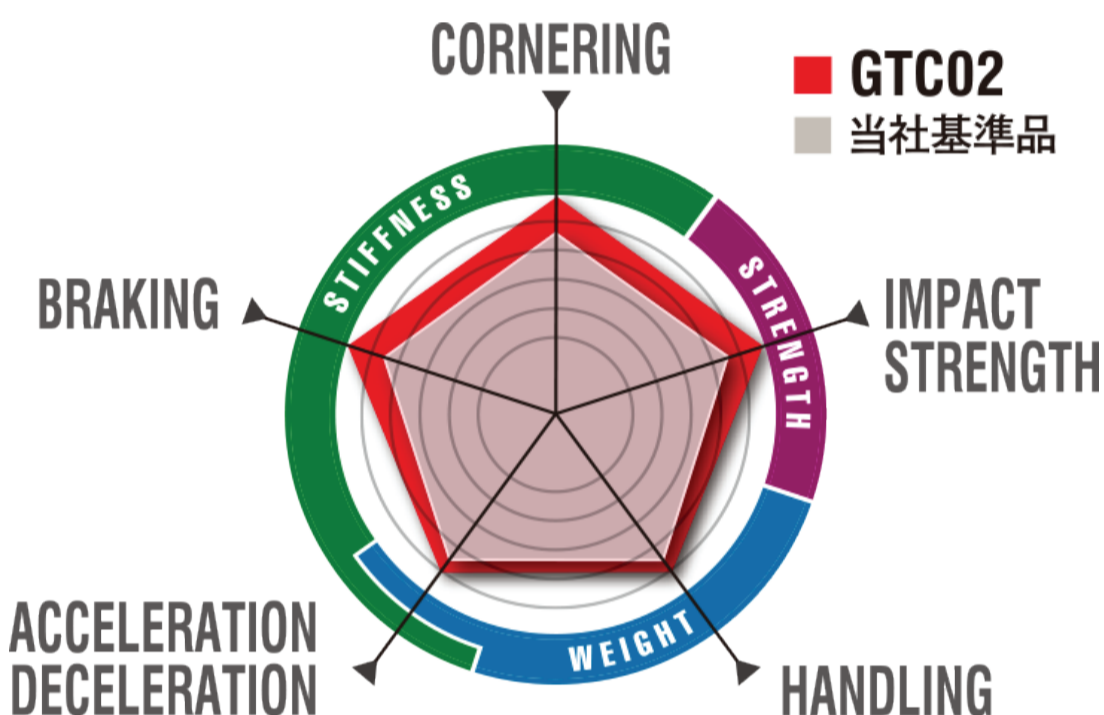

Material:

Main Feature:

Performance Indicator

With its roots in SUPER GT, its high performance, which is almost like a racing wheel, realizes sporty and sophisticated handling.

Product Detail

Concave Face: (3 Face Type)

Adopted a concave face that realizes powerful styling. 3 types of face types are available to achieve the optimum concave for each vehicle.

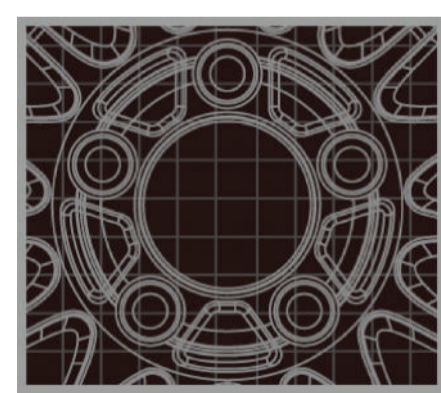

Twin Radiation Dimple

The three dimensional curved surfaces arranged in parallel at the base of the spokes feature a characteristic indentation that cuts off excess fat from the wheel and expands the surface area.

Hub Centric Design

Designed as exclusive bore diameters (72.5mm, 66.5mm) for BMW, AUDI and Mercedes. Demonstrates excellent dynamic balance even at high speeds.

Twin Spoke Design

With its roots in SUPER GT, it was shaped with the ultimate goal of winning races, and its 2x6 spoke design, which makes you feel functional beauty, not only reduces weight but also exhibits high brake heat dissipation.

H Cross Spoke

"H CROSS SPOKE" realizes weight reduction while securing strength and rigidity by applying milling processing to parts with less stress. Severe weight reduction in gram units is possible through design and precision processing derived from extensive data obtained from many years of wheel design and CAE analysis.

Removable Cap System

By inserting a dedicated pin (sold separately) into the hole provided in the cap body, the cap can be easily removed.
